***Paints For a
Lasting finish***

WELCOME TO ANUPAM PAINTS

INDUSTRY CHALLENGES & TECHNOLOGY-DRIVEN COATING PHILOSOPHY

ABOUT ANUPAM PAINTS

Anupam Enterprises is a **52+ year old Indian paint manufacturing company** specialising in **industrial, protective and high-performance coatings**. With **integrated manufacturing, in-house resin technology, and custom-engineered coating systems**, we support **steel fabricators, PEB manufacturers, scaffolding companies and EPC contractors across India**.

OUR STRENGTHS

- 120+ industrial & protective coating systems
- In-house resin plant ensuring consistent quality
- Customised coatings for client-specific applications
- Proven performance in harsh Indian environments

WHY COATINGS ARE CRITICAL FOR STEEL & PEB STRUCTURES

OPERATING CHALLENGES

- Severe corrosion in coastal & industrial zones
- Continuous exposure to moisture, UV & pollution
- Mechanical handling & abrasion during erection
- Tight project timelines demanding fast drying
- High maintenance costs over the structure lifecycle

OUR COATING PHILOSOPHY

- Strong corrosion protection
- Faster drying & early handling
- High abrasion & impact resistance
- Optimised cost per square foot

ADVANCED & PREMIUM PERFORMANCE COATINGS

(Positioning Anupam Paints as a Technology Partner)

FIRE RETARDANT / INTUMESCENT COATINGS (FOR STEEL STRUCTURES)

Purpose:

- Protects steel from rapid temperature rise during fire
- Delays structural failure
- Enhances fire safety compliance

Key Features:

- Expands (intumesces) under fire exposure
- Forms insulating char layer
- Suitable for structural steel & PEB frames

Applications:

Warehouses | Industrial sheds
| Commercial & infrastructure projects

FLUOROPOLYMER COATINGS (ULTRA-LONG LIFE)

Performance Highlights:

- Exceptional UV resistance
- Outstanding colour & gloss retention
- Chemical & pollution resistance

Benefits:

- 15–20+ year aesthetic life
- Very low maintenance
- Premium architectural appearance

Used For:

- Landmark PEB structures
- Coastal & aggressive environments
- High-visibility steel & cladding

CORE COATING SYSTEMS FOR PEB & STEEL STRUCTURES

1. DTM (DIRECT-TO-METAL) COATINGS

Resin Options:

- Alkyd DTM
- Polyurethane (PU) DTM
- Epoxy DTM

Key Features:

- Direct application on cleaned steel
- Eliminates separate primer coat
- Excellent adhesion & surface wetting
- Faster drying >> quicker dispatch

Typical Applications:

- PEB columns, rafters & purlins
- Secondary steel members
- Ducting frames & supports

2. ANTI-CORROSIVE PRIMER SYSTEMS

Primer Types:

- Epoxy Zinc Phosphate Primer
- Epoxy Anti-Corrosive Primer
- Zinc Rich Epoxy Primer (high corrosion zones)

Technical Advantages:

- Strong barrier & sacrificial protection
- Excellent salt spray & moisture resistance
- High adhesion on blasted steel
- Compatible with PU & Epoxy topcoats

3. EPOXY INTERMEDIATE / BUILD COATS

Benefits:

- High film build in fewer coats
- Excellent abrasion & impact resistance
- Superior corrosion barrier

Used For:

- Heavy steel structures
- Warehouses & industrial sheds
- High-load steel components

4. POLYURETHANE (PU) TOPCOATS

Key Properties:

- Excellent UV & weather resistance
- Superior colour & gloss retention
- Smooth, aesthetic finish

Applications:

- Exposed steel structures
- Architectural & visible steel
- PEB sheds & warehouses

NEXT-GENERATION & FAST-TRACK COATING TECHNOLOGIES

POLYSILOXANE COATINGS (NEXT-GEN TECHNOLOGY)

Why Polysiloxane?

- Combines epoxy strength with PU weatherability
- Excellent corrosion & UV resistance
- High solids, low VOC

Advantages:

- Fewer coats required
- Long maintenance intervals
- Excellent life-cycle cost

Applications:

- Heavy steel structures
- Infrastructure & EPC projects

POLYASPARTIC COATINGS (FAST-TRACK PROJECTS)

Key Advantages:

- Ultra-fast curing
- Early handling & return to service
- Excellent abrasion & chemical resistance

Ideal For:

- Fast-track industrial projects
- Shutdown / turnaround jobs
- Scaffolding & high-wear components

HEAT REFLECTIVE ROOF COATINGS

Purpose:

- Reduces roof surface temperature
- Lowers internal temperature
- Improves energy efficiency

Benefits:

- Cooler warehouses & sheds
- Reduced AC & power consumption
- UV & weather resistance

Applications:

- PEB roofs | Metal sheets
- Industrial sheds

WATERPROOFING COATINGS FOR ROOFS

Key Features:

- Seamless waterproof membrane
- Crack-bridging ability
- UV & weather resistance

Benefits:

- Prevents leakage & corrosion
- Extends roof life

Suitable For:

- Metal roofs | Concrete roofs
